* A straightforward, clear application that allows users to quickly split multiple PDFs at once. * Optimized for Windows 7 32/64-bit systems. * The application, like several other PDF page splitters, does lack a page detector or PDF scanner to view the details of the PDFs. Users either need to be familiar with the PDFs they want to break apart or open them up once they've loaded and assessed the pages. This is not a significant problem with page splitting however, as it does not always have to be precise, users who are looking for precision might be disappointed. * An impressive range of features for an affordable price * The application is not expensive, with its encryption and watermark features included, any users who purchase the application will be getting value for money. The encryption feature is especially useful as it allows users to password protect a PDF in two stages, an owner password and a user password. So users can access some features of a PDF without being able to edit everything. For those users who work with sensitive information, this is a very valuable addition. * The page splitting is also advanced, with the ability to automatically turn a PDF into a series of single page PDFs, or break a PDF apart by every specific page number. Users can also set a custom number of pages, with the ability to make single page PDFs and groups of pages in the same command line, from a single, larger PDF. With this feature, users can select from a range of pre-designed watermarks or design a watermark by clicking with the mouse.
